IMPORTANT SAFEGUARDS

When using electrical equipment, basic safety precautions should always be followed, including the following:

READ AND FOLLOW ALL SAFETY INSTRUCTIONS

1. **CAUTION** – To prevent electrical shock, do not mate unit connector until installation is complete and A.C. power is supplied to the unit.

2. **CAUTION** – This fixture provides more than one power supply output source. To reduce the risk of electrical shock, disconnect both normal and emergency sources by turning off the A.C. branch circuit and by disconnecting the unit connector.

3. **CAUTION** – This is a sealed unit. The integral, high temperature Ni-Cad battery is not replaceable. Replace the entire unit when necessary and recycle or dispose of the nickel-cadmium battery properly.

4. **DO NOT USE OUTDOORS.** The I-320 is for use with grounded, UL Listed, indoor fixtures except in heated air outlets or hazardous locations.

5. The I-320 requires an unswitched A.C. power source of either 120 or 277 volts. Properly cap the unused A.C. lead.

6. Do not mount near gas or electric heaters.

7. The I-320 should be mounted in locations and at heights where it will not readily be subjected to tampering by unauthorized personnel.

8. The I-320 will cold strike and operate one 28W or 54W T5 or 2´-8´ T8-T12 or two 2´-4´ T8-T12 instant start, rapid start, U shape or circline fluorescent lamps, including energy saving and long 4 pin compact lamps for 90 minutes.

9. The I-320 is compatible with most A.C. ballasts (including multiple lamp) as follows: Magnetic ballasts – either one or two lamp emergency operation. Electronic ballasts – one lamp emergency operation, consult Customer Service for two lamp emergency operation wiring diagrams.

10. The use of accessory equipment not recommended by the manufacturer may cause an unsafe condition.

11. Do not use this equipment for other than intended use.

12. Install in accordance with the National Electrical Code and local regulations.

13. Installation and servicing should be performed by qualified personnel.

14. Lighting fixture manufacturers, electricians, and end-users need to ensure product system compatibility before final installation.

SAVE THESE INSTRUCTIONS
INSTALLATION INSTRUCTIONS

CAUTION: Before installing, make certain the A.C. power is off and the I-320 unit connector is disconnected.

1. LAMPS OPERATED

The I-320 can be used with most 2′–8′ lamps. Refer to the chart below for the type of lamp(s) operated and the number of lamps to be operated in emergency mode. Contact Customer Service for answers about specific lamps.

*The 6” violet leads provide the lamp selection option. The unit is shipped from the factory with the leads disconnected and capped.

2. MOUNTING THE I-320

Remove the ballast channel cover. Mount the I-320 in the ballast channel at least 1/2″ away from the A.C. ballast(s).

When battery packs are remote mounted, the remote distance can not exceed 1/2 of the distance from ballast to lamp specified by the A.C. ballast manufacturer. For example, if the A.C. ballast manufacturer recommends no more than 25′ remote distance, then the battery pack should not exceed 121/2′. Under no circumstances should the battery pack exceed a distance of 50′ from the lamp.

3. WIRING

Refer to the wiring diagrams on the back page for the appropriate wiring of lamp(s) and ballast. Install in accordance with the National Electrical Code and local regulations. For additional wiring diagrams consult Customer Service.

4. INSTALLING THE CHARGE INDICATOR

**Recessed Troffer Fixture** – Select a convenient location with proper clearance in the ballast cover and drill or punch a 7/8″ hole (1/2″ knockout). Insert the 7/8″ bushing into the hole. Push the plastic tube through the bushing. Route the leads of the LED through the plastic tube. Reconnect the leads to the housing, observing proper polarity (Red/Black or Red lead w/connector to positive (+) red tab). Push the entire assembly back into the tube until the lens collar rests against the plastic tube. The plastic tube should be adjusted so that the Charge Indicator is within 1/4″ of the fixture lens. The Charge Indicator must be visible after installation. Refer to Illustration 1.

**Strip Fixture** – Select a convenient location on the fixture so the Charge Indicator can be seen after installation. Allow for proper clearance inside the fixture and drill or punch a 1/2″ hole. Disconnect the leads from the LED housing. Push the LED housing into the 1/2″ hole until it is firmly locked in place. Reconnect the leads, observing proper polarity (Red/Black or Red lead w/connector to positive (+) red tab). Refer to Illustration 2.

Illustration 1  Recessed Troffer Fixture  Illustration 2  Strip Fixture
5. INSTALLING THE TEST SWITCH
   The Test Switch should be mounted on the ballast channel cover of a recessed troffer, or on the side of a strip fixture, preferably adjacent to the Charge Indicator. Drill or punch a 1/2″ mounting hole.

6. WIRING THE A.C. INPUT
   A. The I-320 and A.C. ballast must be on the same branch circuit.
   B. The I-320 requires an unswitched A.C. power source of either 120 or 277 volts. Select the proper voltage lead and cap the unused lead.
   C. When the I-320 is used with a switched fixture, the A.C. input to the I-320 must be connected ahead of the fixture switch. Refer to Illustration 3 for switched and unswitched fixture wiring diagrams.

7. BALLAST WIRING BLOCK DIAGRAM

   ➀ Select proper voltage lead. Cap unused lead.

8. LABELS
   Attach the appropriate labels adjacent to the Charge Indicator. Annotate Re-lamping label for lamp type and wattage. The Caution and the Re-lamping labels must be on the fixture in a readily visible location to anyone attempting to service the fixture.

9. COMPLETING INSTALLATION
   When the installation is complete, switch the A.C. power on and join the I-320 unit connector.

OPERATION

Normal Mode – A.C. power is present. The A.C. ballast operates the fluorescent lamp(s) as intended. The I-320 is in the standby charging mode. The Charge Indicator will be lit providing a visual indication that the battery is being charged.

Emergency Mode – The A.C. power fails. The I-320 senses the A.C. power failure and automatically switches to the Emergency Mode. One or two lamps are illuminated, at reduced output, for a minimum of 90 minutes. When the A.C. power is restored, the I-320 switches the system back to the Normal Mode and resumes battery charging. See page 1 of the Instruction Manual.

TESTING & MAINTENANCE

Pressing the Test Switch turns off the light on the Charge Indicator and forces the unit into emergency mode, interrupting power to the designated A.C. ballast. The emergency lamp is now being lit by the I-320 unit. After releasing the Test Switch, the fixture returns to normal operation after a momentary delay. To simulate a “BLACK OUT” use the circuit breaker to turn off A.C. power.

Initial Testing – Allow the unit to charge approximately 1 hour, then press the Charge Indicator to conduct a short discharge test. Allow a 24 hour charge before conducting a one hour test.

The I-320 is a maintenance free unit, however, periodic inspection and testing is required. NFPA 101, Life Safety Code, outlines the following schedule:

Monthly – Insure that the Charge Indicator is illuminated. Conduct a 30 second discharge test by depressing the Charge Indicator. One lamp should operate at reduced output.

Annually – Insure that the Charge Indicator is illuminated. Conduct a full 1 1/2 hour discharge test. The unit should operate as intended for the duration of the test.

“Written records of testing shall be kept by the owner for inspection by the authority having jurisdiction.”

SERVICING SHOULD BE PERFORMED BY QUALIFIED PERSONNEL.
   Consult Customer Service or visit www.iotaengineering.com for current warranty information.
