21006379

DID YOU KNOW? Smoke alarms save lives. If there is a fire in your home, smoke spreads fast and you need smoke alarms to give you time to get out. Having a working smoke alarm cuts the chances of dying in a reported fire in half. Almost two-thirds of home fire deaths resulted from fires in homes with no smoke alarms or no working smoke alarms.

- 1) Install smoke alarms inside and outside each bedroom and sleeping area. Install alarms on every level of the home. Install alarms in the basement.
- 2) It is best to use interconnected smoke alarms. When one smoke alarm sounds they all sound.
- 3) Test all smoke alarms at least once a month. Press the test button to be sure the alarm is working.
- 4) Replace all smoke alarms when they are 10 years old.
