

## RMC-60 Remote Mounting Covers

### Model No.

- > RMC-60
- > Item # PRT00009

### Description

- > Standard wire bundle covers

### Comments/Application

- > For emergency ballast installation on top of certain fixtures
- > May be required by state or local codes
- > One RMC-60 kit needed per emergency ballast (includes two covers)

**This Product Is For Use With Bodine Products Only**

## RMC-LP - Low Profile Remote Mounting Covers

### Model No.

- > RMC-LP
- > Item # PRT00047

### Description

- > Wire bundle covers for low-profile products

### Comments/Application

- > For emergency ballast installation on top of certain fixtures
- > May be required by state or local codes
- > One RMC-LP kit needed per emergency ballast  
Note: For certain low-profile emergency ballasts, one RMC-LP kit can be used for mounting two units. Please contact factory for details.

## Test/Monitor Wall Plate Assembly-SP

### Model No.

- > PL-SP
- > Item # PRT00003

### Description

- > Single-pole test switch rated 3A @ 277 VAC (6A @ 125 VAC) & LED indicator light on wall plate

### Comments/Application

- > For remote installation of the test switch: next to fixture, on wall, in maintenance room, etc. (maximum distance: 50 feet)
- > Can be used with emergency ballasts normally supplied with a single-pole test switch
- > Fits single gang box (not supplied)

**This Product Is For Use With Bodine Products Only**

## Test/Monitor Wall Plate Assembly-DP

### Model No.

- > PL-DP
- > Item # PRT00013

### Description

- > Double-pole test switch rated 3A @ 277 VAC & LED indicator light on wall plate

### Comments/Application

- > For remote installation of the test switch: next to fixture, on wall, in maintenance room, etc. (maximum distance: 50 feet)
- > Can be used with emergency ballasts normally supplied with a double-pole test switch
- > Fits single gang box (not supplied)

## ITS (Indicator Light Test Switch)

**WARNING** See ITS and Emergency Ballast installation instructions for proper wiring connections. Failure to follow these instructions may cause personal injury or equipment damage.

### Model No.

- > ITS
- > Item # PRT00064

### Description

- > Indicator light, test switch assembly rated 3A @ 277 VAC

### Comments/Application

- > The ITS is both test switch and LED indicator light in one assembly allowing for mounting in a single fixture hole.

**This Product Is For Use With Bodine Products Only**

# ILLUMINATED TEST SWITCH (ITS) INSTALLATION INSTRUCTIONS

FOR EMERGENCY BALLAST INSTALLATION AND WIRING, REFER TO  
EMERGENCY BALLAST INSTALLATION INSTRUCTIONS.

## ITS INSTALLATION OPTIONS

(Observe proper polarity.)

1. Select the appropriate ITS installation diagram for your application from the options shown.
2. Locate the ITS so the charging indicator light is on the outside of the fixture and can be seen after installation.
3. Wiring diagrams for the ITS are on the back of this page.

- Option 3** Follow the steps below to install the test switch on the ballast channel cover.
- Drill or punch a 7/8 inch hole in ballast channel cover and insert bushing.
  - Slide the ITS tube up or down to adjust the height and visibility of the charging indicator light.
  - If the tube is too long, cut the plastic tubing to necessary length.
  - After cutting the tube to the proper length, assemble the ITS.

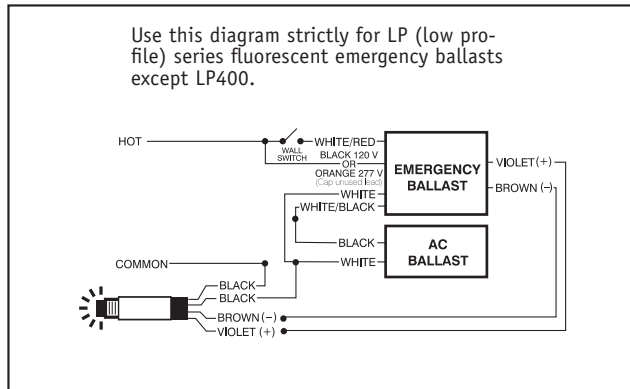

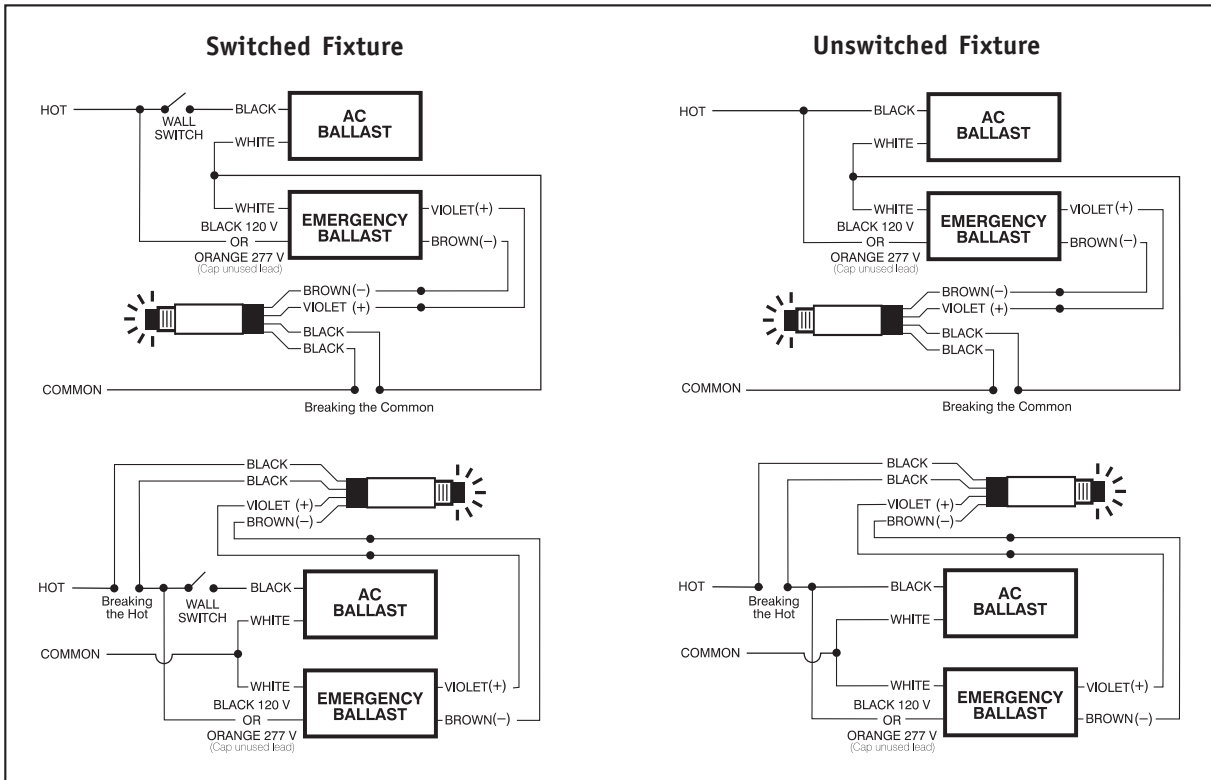

To assemble the ITS:

- Remove the washer and hex nut from the ITS.
- Place the strain relief bushing on the wires back from the tip of the switch approximately the length of the plastic tube.
- Feed the switch through the plastic tubing and seat the tapered end of the strain relief bushing into the tubing. The threaded end of the switch should protrude slightly from the plastic tubing. If the threaded end of the switch is not extending beyond the end of the plastic tubing or is protruding too far, reposition the strain relief bushing until you achieve the desired result.
- Place the washer and hex nut back on the switch and tighten.

**The ITS replaces the original test switch and LED provided with the emergency ballast.**

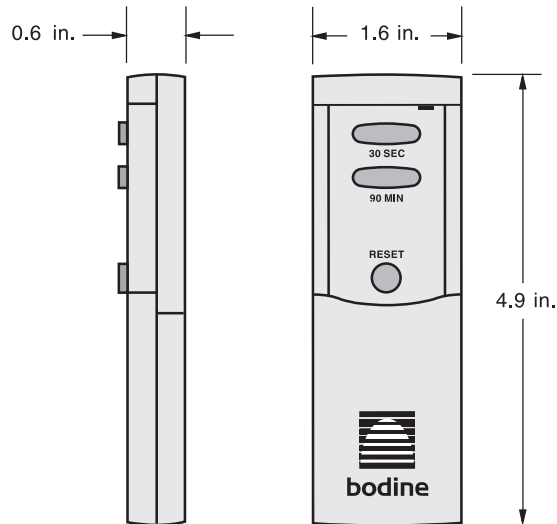

# ITS WIRING DIAGRAMS

(Primary circuits only; lamp connections not shown.)

If wired correctly, the ITS indicator light should be ON when AC power is supplied to the fixture, indicating that the emergency ballast battery is charging. After installing, mark with the "PUSH TO TEST" and "CHARGING INDICATOR LIGHT" labels.

## WHRCT Remote Control Transmitter

### Model No.

- > WHRCT
- > Item # PRT00022

### Description

- > Remote Control Transmitter

### Comments/Application

- > For use with an RCT emergency ballast or a CheckMate remote controlled testing unit
- > Two AAA-size batteries included
- > See users manual for effective operating range

## Keyed Test Switch Panel Mount Assembly

### Model No.

- > KTS-PM
- > Item # PRT00023

### Description

- > Keyed Test Switch for panel mount installation

### Comments/Application

- > For simultaneous testing of multiple emergency ballasts
- > Comes fully assembled and ready to mount onto service panel or other enclosure
- > Double-pole switch; each contact rated 20 A, 300 VAC

**This Product Is For Use With Bodine Products Only**

**L1000026**

## Keyed Test Switch Junction Box Assembly

### Model No.

- > KTS-JB
- > Item # PRT00024

### Description

- > Keyed Test Switch with insulated junction box

### Comments/Application

- > For simultaneous testing of multiple emergency ballasts
- > Comes fully assembled and ready to surface mount
- > Insulated box rating: NEMA 3R
- > Double-pole switch; each contact rated 20 A, 300 VAC

**This Product Is For Use With Bodine Products Only**

## Keyed Test Switch Wall Plate Assembly

### Model No.

- > KTS-PL
- > Item # PRT00025

### Description

- > Keyed Test Switch on double-gang wall plate

### Comments/Application

- > For simultaneous testing of multiple emergency ballasts
- > Comes fully assembled and ready to mount into a standard double-gang switch box (not supplied)
- > Double-pole switch; each contact rated 20 A, 300 VAC

**This Product Is For Use With Bodine Products Only**

**L1000024**

# bodine®

## KTS Keyed Test Switch

Keyed test switch for testing multiple emergency ballasts

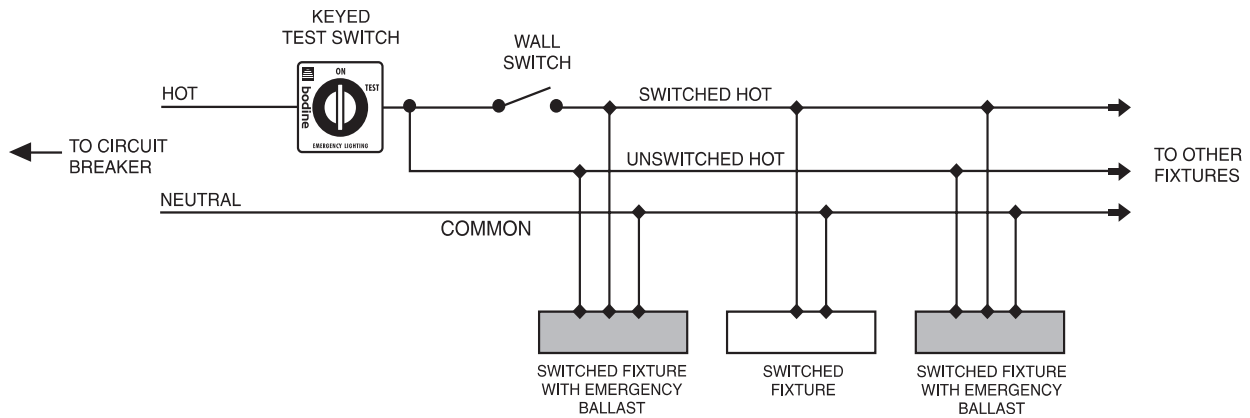

### INSTALLATION INSTRUCTIONS

#### OPTIONS

KTS-PL	<i>Keyed test switch</i> with legend and double gang switch <i>plate</i>
KTS-JB	<i>Keyed test switch</i> with legend and insulated <i>junction box</i>
KTS-PM	<i>Keyed test switch</i> with legend for <i>panel mount</i>

#### Typical Application

Figure 1. Typical installation of the *keyed test switch (KTS)* for testing multiple emergency ballasts simultaneously.

All fixtures in Figure 1 are controlled with a wall switch. The fixtures containing emergency ballasts must also have an unswitched hot obtained ahead of the wall switch and down from the **KTS** as shown in Figure 1.

The UL Listed **KTS** is a key operated double pole switch that is used to control two separate emergency lighting circuits. Terminals 1 & 2 constitute one pole of the switch and terminals 3 & 4 the other pole. See details on page 2 in Figure 2.

Each of the contacts is rated at 20A and 300 VAC. The sum of the currents supplied to all the fixtures in the circuit should not exceed this switch rating. Make sure that all connections are in accordance with the National Electrical Code and any local regulations.

## Operation Of The Keyed Test Switch (KTS)

1. When the **KTS** is in the “ON” (or closed) position, all fixtures in the circuit will operate normally.
  - a. If AC power is present and the wall switch is closed, normal lighting would be observed.
  - b. If AC power is lost, then emergency lighting would be observed.
2. When the **KTS** is in the “TEST” (or opened) position, the **KTS** will break power to all AC ballasts and emergency ballasts in the circuit. Only fixtures containing emergency ballast would illuminate.

**Figure 2.** Schematic of switch and back of switch showing connected wires for two circuit operation.

## Double Gang Switch Plate Option (KTS-PL)

The **KTS-PL** comes fully assembled and ready to mount onto a standard double gang switch box as shown in Figure 3. To install, connect wires from the switch box to the terminals of the **KTS** in accordance with these instructions (See Figures 1 & 2 and paragraphs 1 & 2). Make sure the ratings of the switch(es) are not exceeded and all connections are in accordance with the National Electrical Code and any local regulations. Finally, attach the **KTS-PL** to the standard double gang switch box with the four screws provided.

**Figure 3.** KTS-PL *keyed test switch* with legend and double gang switch plate.

## Insulated Junction Box Option (KTS-JB)

The **KTS-JB** comes fully assembled and ready to surface mount as shown in Figure 4. The insulated junction box has a NEMA 3R rating.

To install:

1. Remove the two cover screws and set aside the integral **KTS** and cover;
2. With two appropriate wall mounting screws (not provided), mount the box portion of the enclosure onto the wall and attach the appropriate conduit and fittings (not provided);
3. Pull the appropriate number of wires and connect to the terminals of the **KTS** in accordance with these instructions (See Figures 1 & 2 and paragraphs 1 & 2). Make sure the ratings of the switch(es) are not exceeded and that all connections are in accordance with the National Electrical Code and any local regulations;
4. Re-attach the cover and wired **KTS** to the mounted box with the two cover screws provided.

**Figure 4.** KTS-JB keyed test switch with legend and insulated junction box.

## Panel Mount Option (KTS-PM)

Before installing the **KTS-PM**, a hole in the panel must be prepared in accordance with dimensions shown in Figure 5. Note that a slot or keyway must be cut at the top of the hole.

To disassemble the **KTS-PM** (Refer to Figure 6 while reading these instructions):

1. The locking tab must be rotated (counter-clockwise as viewed from the back of the switch) to the unlock position. Note that the locking tab can be rotated by gripping and rotating the locking collar.
2. The switch assembly must then be detached from the lock assembly and nut by firmly pulling them apart.
3. Then remove the nut from the lock assembly.

To assemble the **KTS-PM** onto the panel (Refer to Figure 6 while reading these instructions):

1. Using the key, return the lock to the "ON" position and remove the key from the lock. This will properly align and lock the keyed shaft of the lock assembly.
2. Align the key tab of the lock assembly with the keyway in the panel and insert the lock assembly through the prepared hole in the panel.
3. Secure the lock assembly to the panel with the nut.
4. Attach the switch assembly onto the lock assembly being careful to align the keyed receptacle of the switch assembly to that of the keyed shaft of the lock assembly.
5. After properly seating the switch assembly to the lock assembly, secure or lock them together by rotating the locking tab in the clockwise direction approximately 60°. Note that the locking tab can be rotated by gripping and rotating the locking collar.
6. Re-insert the key into the lock and check for proper operation.
7. Insert two or four wires into the switch terminals as required by the application (one or two circuits) and secure each wire with the appropriate screw as shown in Figure 2.

**Figure 5.** KTS-PM mounted on panel and dimensions for hole in panel.

**Figure 6.** Exploded view of KTS-PM showing detailed views.

## T-Bar Mounting Bracket Assembly

### Model No.

- > TBAR-MB
- > Item # PRT00018

### Description

- > T-Bar mounting bracket for remote, drop ceiling installation

### Comments/Application

- > Can be used with emergency ballasts supplied with conduit
- > Drop wires not included
- > Extension brackets increase height dimension to 4.5"

**This Product Is For Use With Bodine Products Only**

## T-Bar Mounting Bracket

For Next To Fixture, Drop Ceiling Emergency Ballast Installation

### INSTALLATION INSTRUCTIONS

**WARNING:** THIS BRACKET IS INTENDED FOR INDOOR USE IN NON-CORROSIVE ENVIRONMENTS. IT MUST BE USED ONLY AS ILLUSTRATED. MISUSE OR MISAPPLICATION MAY CAUSE FAILURE RESULTING IN PROPERTY DAMAGE OR BODILY INJURY.

**Safety Instructions:** All safety regulations required by the job site must be observed. Special attention should be given to the following instructions.

#### While working on site:

- > Observe all federal and local safety regulations.
- > Wear a hard hat.
- > Wear safety glasses with side shields.
- > Wear gloves to avoid splinters and cuts.
- > When working above ground level, be sure the structure will support your weight.
- > Be aware of people working above and below.
- > Perform electrical connections per emergency ballast instructions.
